

## New 2-points spreaderbar (S/M/L) Type 2115 - 2116 - 2117

This type of spreader bar is a 2 point spreaderbar for slings which is extremely flat and therefore reducing the loss of height. The spreader bar will be available in three sizes:

Type	Art. nr.	Length	Hight
Small	# 2117	352 mm	50 mm
Medium	# 2116	496 mm	76 mm
Large (300kg motor)	# 2115	640 mm	117 mm

The spreaderbars are made of aluminum, gray lacquered ral 7004 and will be attached to the ceiling motor using an axle and stainless steel circlips.

The Safe Working Load of the spreaderbar is 300 kg which naturally is limited by the SWL of the motor and/or slings.

This type of spreaderbar may only be used with our ceiling motor type 2800.
